## Providing Services

### Protecting Lives from Sediment Disasters

As natural disasters continue to diversify and increase in scale around the world, the measures required to protect lives from sediment disasters are also changing. The Sediment Disaster Prevention Publicity Center closely tracks changes in sediment disaster mitigation methods, and provides policy advice to countries around the world, tailored to their unique regional characteristics, to improve disaster resilience.

## Project Achievement / Technical Expertise

### Organizational Goals

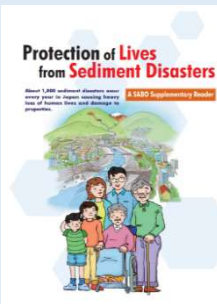

The Sediment Disaster Prevention Publicity Center contributes to the protection of lives and assets and preservation of the environment by fostering collaboration between the government and related organizations to address the sediment disasters occurring nationwide, and raising awareness, providing education and carrying out technological exchange on the nature of sediment disasters, methods of mitigation and the importance of early evacuation.

### Publicity Methods

We carry out surveys, research and development on methods to raise awareness of sediment disaster prevention and mitigation.

- Disaster Prevention Manual
- 3D Theater

### Disaster Resilience

We carry out activities and provide support to residents to increase regional disaster resilience in areas vulnerable to sediment disasters.

- Disaster Mitigation Seminar

### Technological Exchange

We support exchange activities of domestic sediment disaster prevention and mitigation technologies.

- Exchange with engineers from Sri Lanka
